

MOBIUS SECURITY TESTING FRAMEWORK

MOBIUS
CONSULTING

Actualising change

As part of secure, business-as-usual operations, organisations are required to conduct security testing on an ongoing basis to ensure continuous identification of security weaknesses.

Security testing must be efficient and conducted using a structured approach taking into account the Why, Who, What & Where, When and How of security testing.

- Why: Baseline security, compliance
- Who: Roles and Responsibilities
- What & Where: Scope
- When: Triggers and frequency
- How: Approach, methodology, and process

However, due to the ever-evolving risk landscape and internal and external testing requirements, organisations face conflicting priorities, which leads to unstructured, ad-hoc and ineffective security testing efforts.

Mobius is well-equipped to assist organisations in establishing a robust security testing framework which enables structured, consistent and continuous security testing efforts for critical business assets.

WHY MOBIUS

We assist organisations adopt a standardised approach to security testing through ensuring that security testing guidelines and principles are established. The framework considers the organisation-specific industry, operating entities, internal and external stakeholder requirements, as well as regulatory requirements, to ensure vulnerabilities on critical systems are effectively identified.

In order to ensure that best practice is incorporated in the establishment of the security testing framework, we work in collaboration with our penetration testing team who provides hands-on guidance for security testing standard.

BENEFITS

Standardised approach to security testing

Targeted budgeting and resource allocation

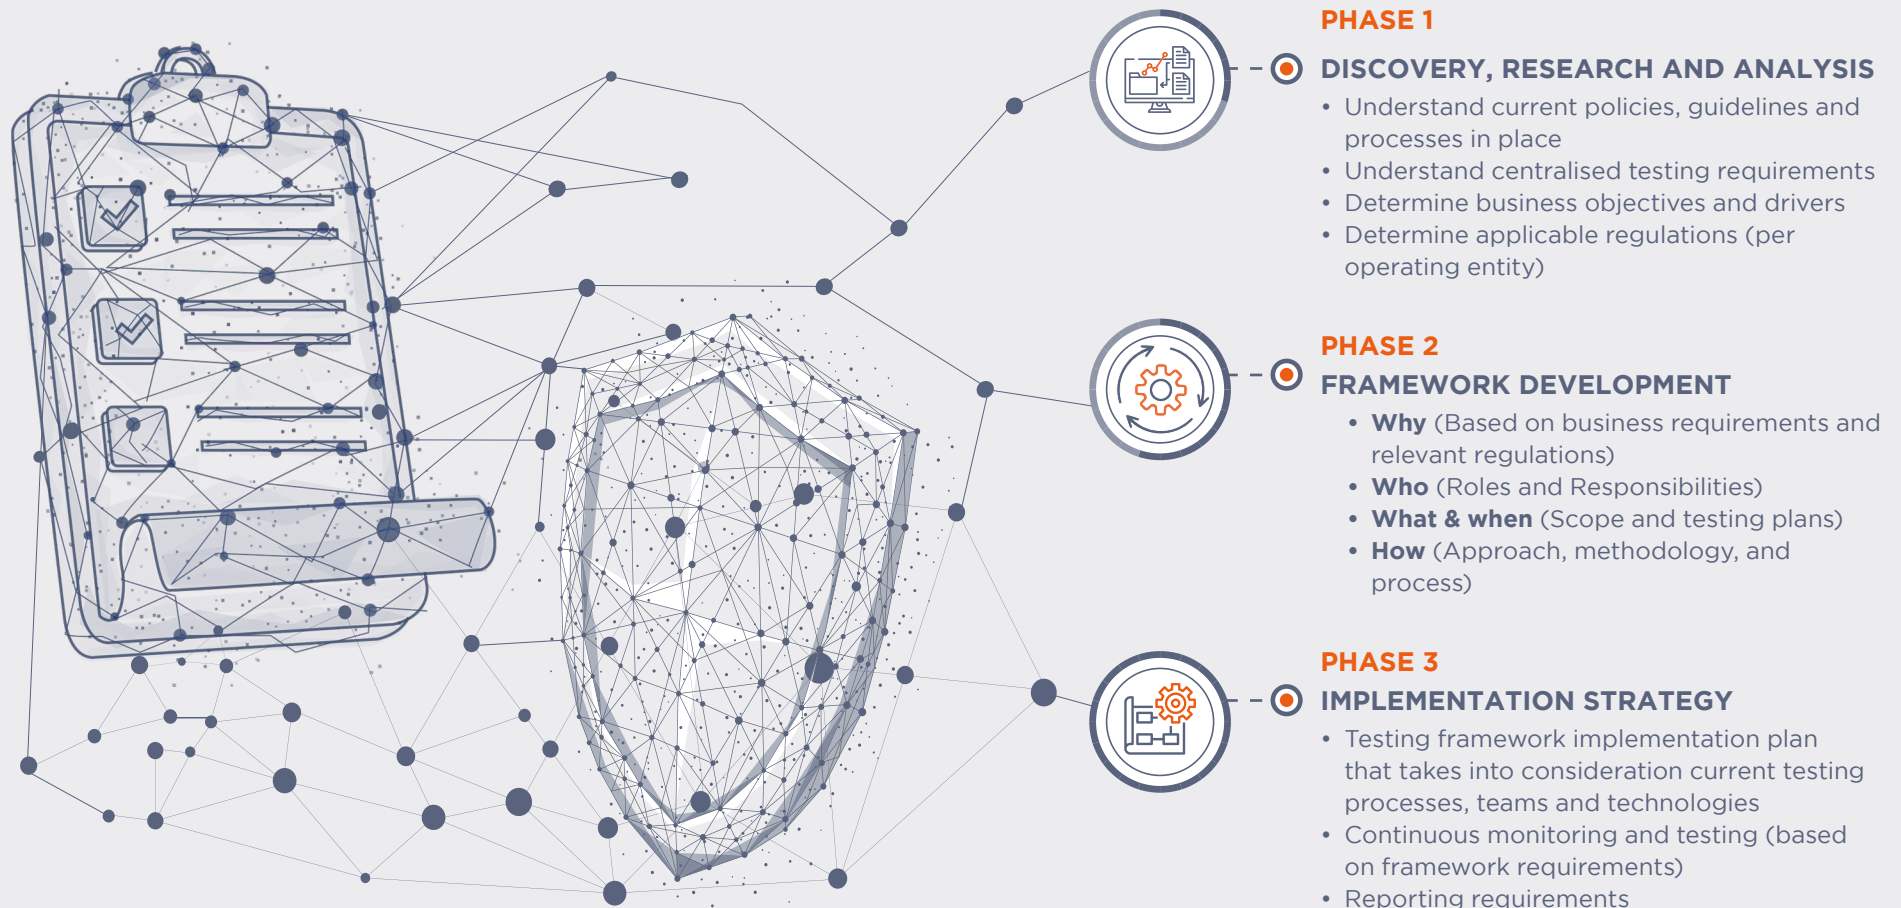

Reduced applicable threat landscape and exploit surface

MOBIUS SECURITY TESTING FRAMEWORK

Approach / phases

The Mobius approach to developing and adopting a Security Testing Framework:

DID YOU KNOW

That many organisations conduct security testing without knowing the why, what, who, or when to test, simply because they lack defined security guidelines and principles.
